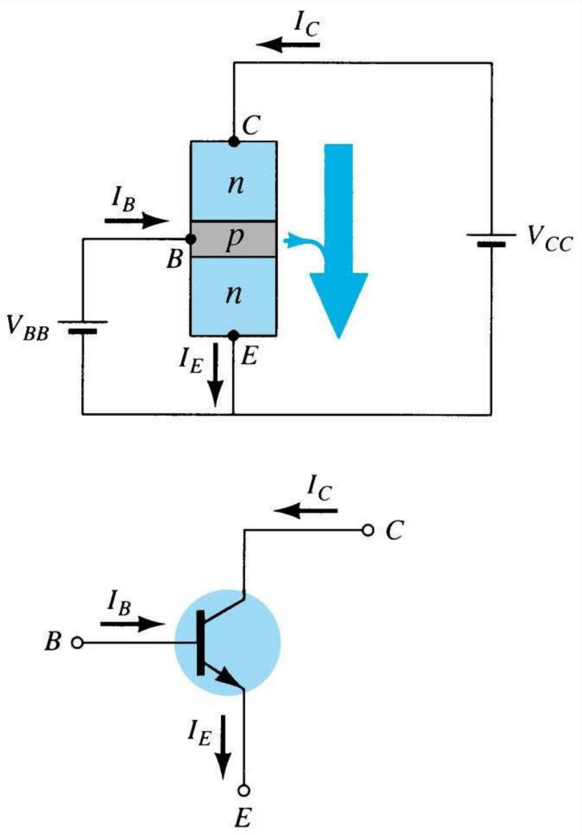
Common–Emitter Configuration

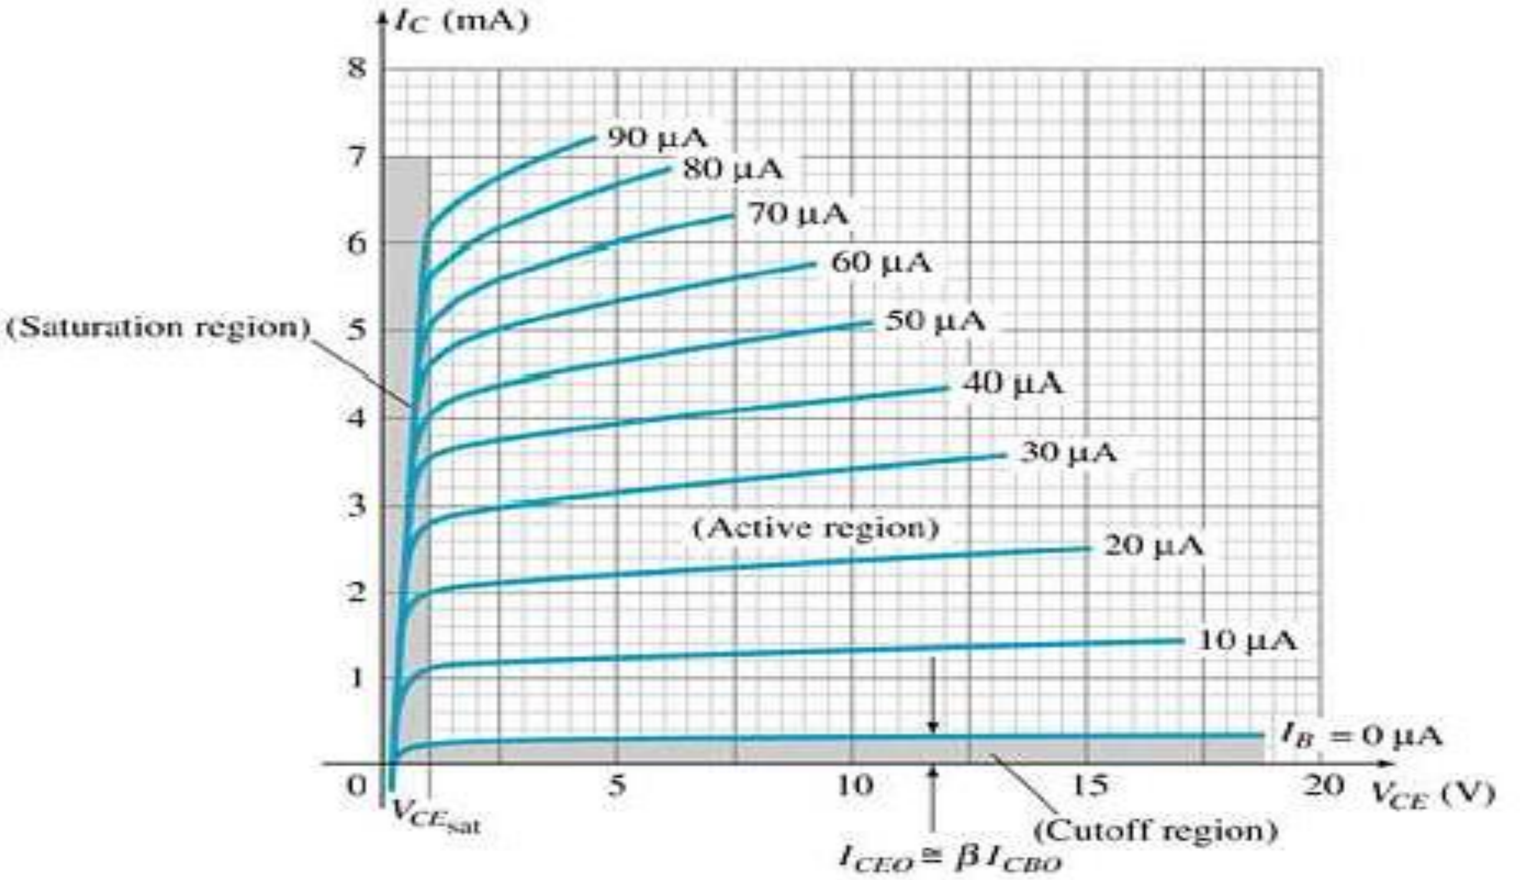
The emitter is common to both input (base-emitter) and output (collector- emitter).

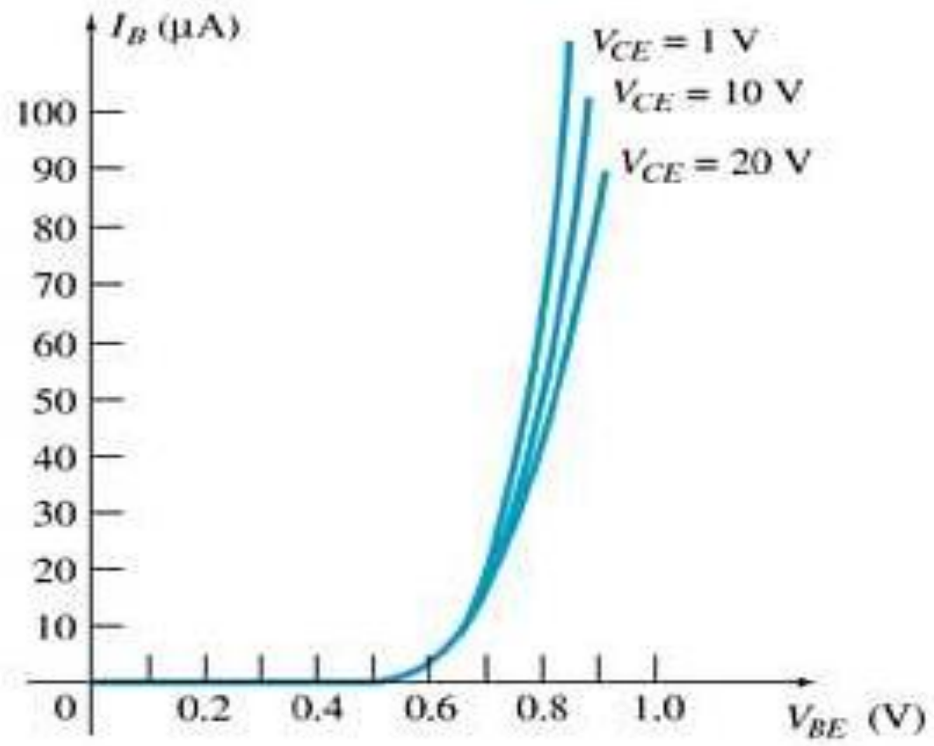
The input is on the base and the output is on the collector.



(a)

Common-Emitter Characteristics





Collector Characteristics

Base Characteristics

Common-Emitter Amplifier Currents

Ideal Currents

$$I_E = I_C + I_B \qquad I_C = \alpha I_E$$

Actual Currents

$$I_C = \alpha I_E + I_{CBO}$$

where I_{CBO} = minority collector current

I_{CBO} is usually so small that it can be ignored, except in high power transistors and in high temperature environments.

When I_B = 0 μA the transistor is in cutoff, but there is some minority current flowing called I_{CEO}.

$$I_{CEO} = \left.\frac{I_{CBO}}{1-\alpha}\right|_{I_B = 0\mu A}$$

Beta (β)

β represents the amplification factor of a transistor. (β is sometimes referred to as h_{fe}, a term used in transistor modeling calculations)

In DC mode:

$$\beta_{dc} = \frac{I_C}{I_B}$$

In AC mode:

$$\beta_{ac} = \frac{\Delta I_C}{\Delta I_B}\bigg|_{V_{CE} = \text{constant}}$$

Beta (β)

Determining β from a Graph

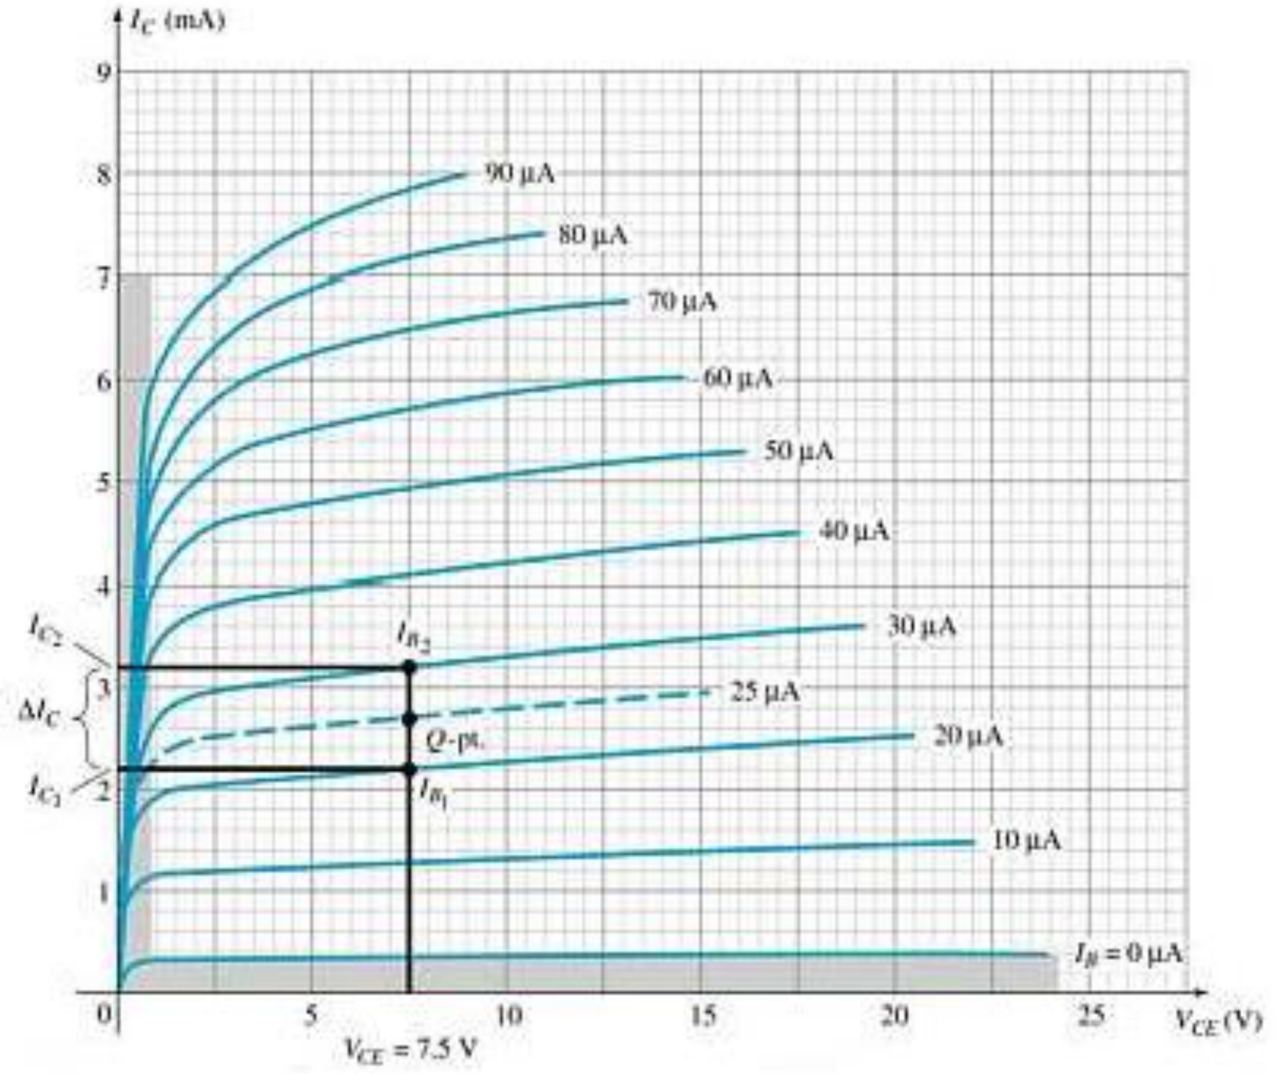
$$\beta_{AC} = \frac{(3.2mA - 2.2mA)}{(30\mu A - 20\mu A)}$$

$$= \frac{1\ mA}{10\mu A}\Big|_{V_{CE}=7.5}$$

$$= 100$$

$$\beta_{DC} = \frac{2.7\ mA}{25\ \mu A}\Big|_{V_{CE}=7.5}$$

$$= 108$$



Beta (β)

Relationship between amplification factors β and α

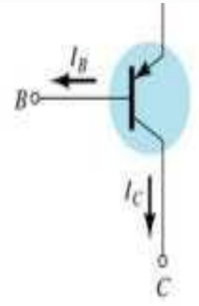
$$\alpha = \frac{\beta}{\beta + 1} \qquad \beta = \frac{\alpha}{\alpha - 1}$$

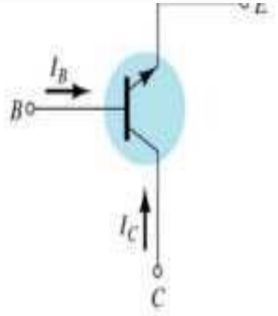
Relationship Between Currents

$$I_C = \beta I_B \qquad I_E = (\beta + 1) I_B$$

Common–Collector Configuration

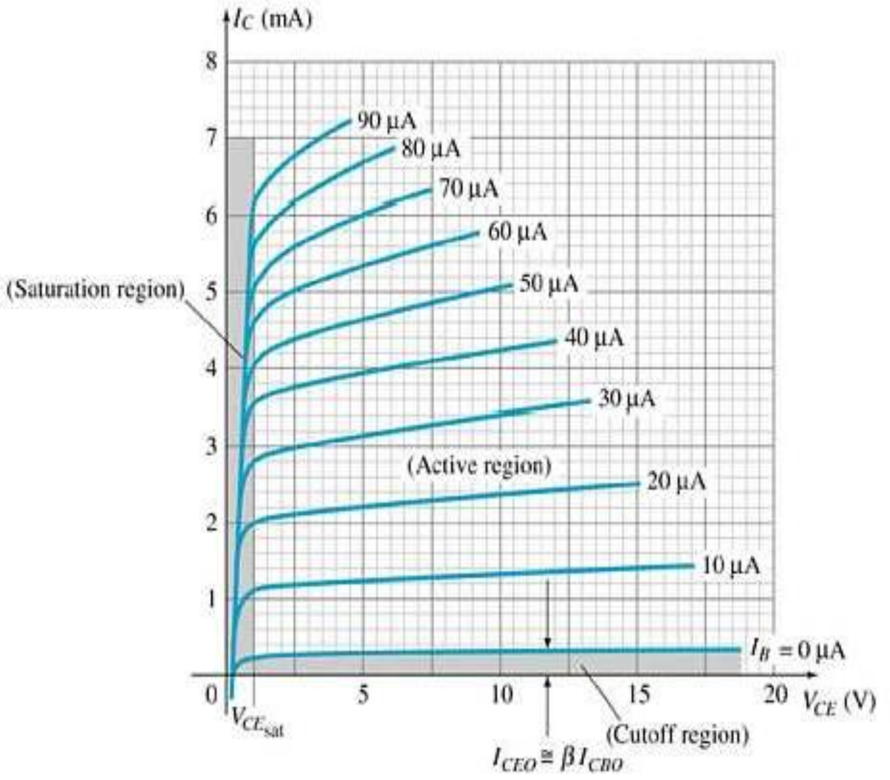
The input is on the base and the output is on the emitter.





Common–Collector Configuration

The characteristics are similar to those of the common-emitter configuration, except the vertical axis is I_E.

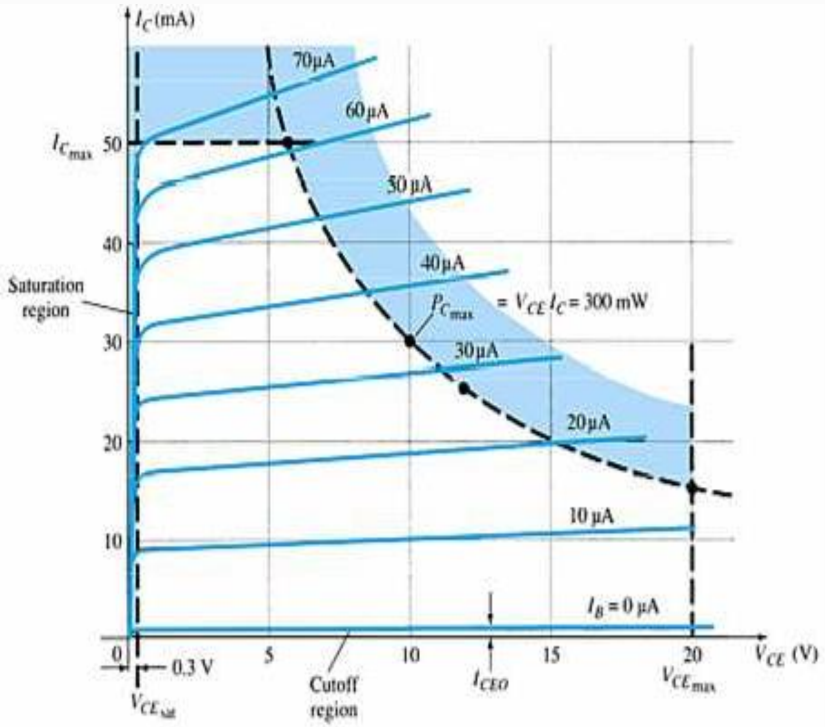


Operating Limits for Each Configuration

V_{CE} is at maximum and I_C is at minimum (I_{Cmax}= I_{CEO}) in the cutoff region.

I_C is at maximum and V_{CE} is at minimum ($V_{CE\ max}$ = V_{CEsat} = V_{CEO}) in the saturation region.

The transistor operates in the active region between saturation and cutoff.



Power Dissipation

Common-base:

$$P_{Cmax} = V_{CB}I_C$$

Common-emitter:

$$P_{Cmax} = V_{CE}I_C$$

Common-collector:

$$P_{Cmax} = V_{CE}I_E$$

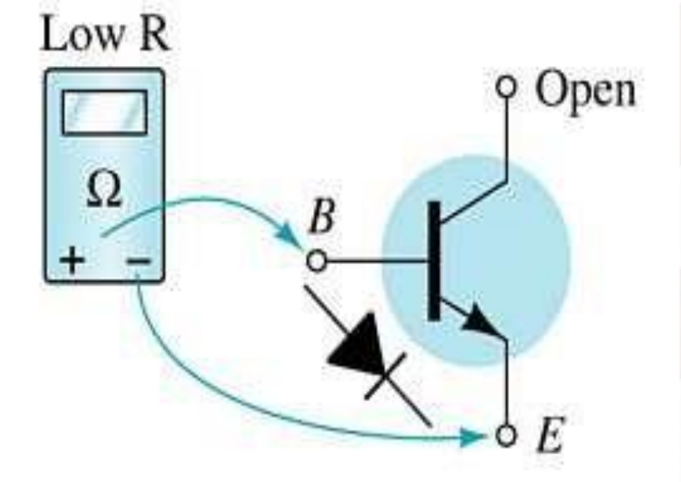
Transistor Testing

- **Curve Tracer**
  Provides a graph of the characteristic curves.

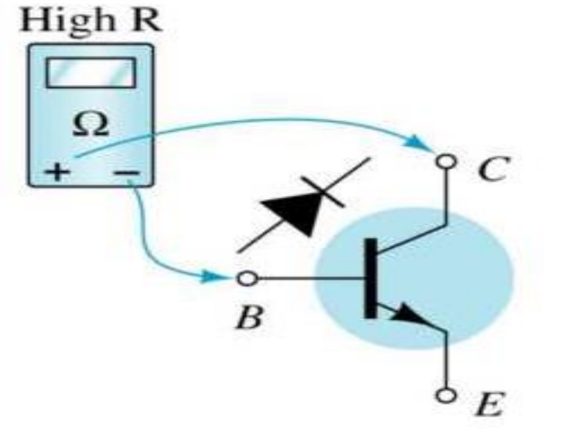
- **Digital Meters**
  Some DMMs measure β_{DC} or h_{FE}.

- **Ohmmeter**

- Checking the forward-biased base-to-emitter junction of an *npn* transistor.



- Checking the reverse-biased base-to-collector junction of an *npn* transistor.



Transistor Casing

- Various types of general-purpose or switching transistors:
  (a) low power
  (b) medium power
  (c) medium to high power.
