

**A Project Report**  
on  
**VIRTUAL CLASSROOM**

*Submitted in partial fulfillment of  
the requirement for the award of the degree of*

**Bachelor of Technology in Computer Science and Engineering**

(Established under Galgotias University Uttar Pradesh Act No. 14 of 2011)

**Under The Supervision of  
Mr. Dr. Rajesh Kumar  
Assistant Professor  
Department of Computer Science and Engineering**

**Submitted By**

18SCSE1050018-VAIBHAV AGARWAL

18SCSE1120020-AKSHAT SWAMI

**SCHOOL OF COMPUTING SCIENCE AND  
ENGINEERING DEPARTMENT OF COMPUTER SCIENCE AND  
ENGINEERING GALGOTIAS UNIVERSITY, GREATER NOIDA,  
INDIA DECEMBER-2021**

**SCHOOL OF COMPUTING SCIENCE AND  
ENGINEERING  
GALGOTIAS UNIVERSITY, GREATER NOIDA**

**CANDIDATE'S DECLARATION**

I/We hereby certify that the work which is being presented in the project, entitled “ **Virtual Classroom** ” in partial fulfillment of the requirements for the award of the **BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AND ENGINEERING** submitted in the **School of Computing Science and Engineering** of Galgotias University, Greater Noida, is an original work carried out during the period of **JULY-2021 to DECEMBER-2021**, under the supervision of **Mr. Rajesh Kumar, Assistant Professor, Department of Computer Science and Engineering** of School of Computing Science and Engineering, Galgotias University, Greater Noida

The matter presented in the project has not been submitted by me/us for the award of any other degree of this or any other places.

18SCSE1050018-VAIBHAV AGARWAL

18SCSE1120020-AKSHAT SWAMI

This is to certify that the above statement made by the candidates is correct to the best of my knowledge.

Supervisor (Mr. R

ajesh kumar, Assistant Professor)

**CERTIFICATE**

The Final Thesis/Project/ Dissertation Viva-Voce examination of **18SCSE1050018-VAIBHAV AGARWAL,18SCSE1120020-AKSHAT SWAMI** has been held on \_\_\_\_\_ and his/her work is recommended for the award of **BACHELOR OF TECHNOLOGY IN COMPUTERS SCIENCE AND ENGINEERING.**

## **ABSTRACT:-**

Studies show that students who study at a distance may be more inclined to isolate themselves and a lack of 'presence' and support, which could adversely affect their learning and performance. Recently, the emergence of high-speed affordable, affordable and reliable broadband means a new list of digital, support and synchronization.

The interaction between students and faculty makes online learning more effective, thus it can help to solve some of these problems.

This paper presents the findings of a study involving graduate students using Adobe Connect with Wimba Live visual classes to present a series of seminars as part of Waikato University's Postgraduate Diploma in Education. Explores students' ideas on the importance of classes in building relationships, supporting communication as well as interaction, and explores the factors that have contributed to this.

The results show that while virtual the use of the classroom is well-regarded, your value influenced by work, communication tools, multimedia applications and technical / editing features — some of which were much more than that student control.

These issues will be considered and discussed, with recommendations presented to teachers who are considering using visual classes to support their online course learning programs.

**Keywords:-** synchronous; virtual; classroom; interaction; isolation; presence; dialogue

## **INTRODUCTION**

Extensive research is available that highlights the importance of communication, communication, and building relationships in distance learning (Collis, 1996; Gosmire, Morrison & van Osdel, 2009; Picciano, 2002).

However, from the earliest days of teaching the grades, there were problems what is clear about how this can best be achieved with local students they are scattered.

Research shows that students who study far away may be less prone to depression isolation and psychological distance — and these ideas can have a detrimental effect on their performance and role in academic retention issues (Moore & Kearsley, 1996).

Recently, access to technology and performance improvements have opened up new opportunities for teachers and students to engage and communicate in almost the same way face to face conditions, using advanced technology in compatible environments such as virtual classes or Google Plus.

However, few teachers have tested this ability, instead choosing only for standard sync systems like Moodle, Blackboard Learn, or Desire2Learn. Best practices to be trailed by clients while putting away and overseeing passwords in a productive way to get passwords however much they can to forestall unapproved access.

## **FORMULATION OF PROBLEM**

The results suggest that visual classes can make a significant contribution to the ODL, especially of learning-integration of the community, which provides a variety of interaction and communication options, knowledge, and to develop and / or maintain supportive relationships between students and teachers.

However, the results also show that maximizing benefits from synchronous areas need great student and teacher preparation and knowledge, and that they

work for consistent, but very different purposes, in disagreements. This The study has several implications for those considering high-performance classes education.

First, if the goal is to use classrooms to do 'advanced' or assessment tasks, pre-work is appropriate done with students to develop adequate knowledge of the tools and understanding of The skills of multimedia classes so that they can use them effectively in representation results.

This applies especially to procedures for accessing external websites, streaming audio or video, using functions such as slide annotation, and live document sharing. This study is consistent with previous reports (Falloon, 2011b), in showing the dangers of thinking students have the knowledge, or will be able to independently, to use this to the best of their ability profit. It is recommended that study time be developed for the development of this skill. It is also suggested that teachers should play an active role here because of the classrooms function .

## TECHNOLOGY USED:-

### HTML

HTML (Hypertext Markup Language) is the predominant markup language for webpages. It provides a means to describe the structure of text-based information in a document by denoting certain text as headings, paragraphs, lists, and so on and to supplement that text with interactive forms, embedded images, and other objects. HTML is written in the form of labels (known as tags), surrounded by angle brackets. Advantages of HTML are:-

- An HTML document is small and hence easy to send over the net. It is small because it does not include formatted information.
- HTML is platform independent.
- HTML tags are not case-sensitive.

### JAVASCRIPT

JavaScript is a script-based programming language that was developed by Netscape Communication Corporation. JavaScript was originally called LiveScript and renamed as JavaScript to indicate its relationship with Java. JavaScript supports the development of both client and server components of Web-based applications. On the client side, it can be used to write programs that are executed by a Web browser within the context of a

Web page. On the server side, it can be used to write Web server programs that can process information submitted by a Web browser and then update the browser's display accordingly.

## CSS

Cascading Style Sheets (CSS) is a style sheet language used to describe the presentation of a document written in HTML or XML (including XML dialects such as SVG or XHTML). CSS describes how elements should be rendered on screen, on paper, in speech, or on other media.

## PHP

PHP is a server-side scripting language designed specifically for web development. PHP can be easily embedded in HTML files and HTML codes can also be written in a PHP file. The thing that differentiates PHP with client-side language like HTML is, PHP codes are executed on the server whereas HTML codes are directly rendered on the browser.

## MySQL

MySQL is a relational database management system based on SQL – Structured Query Language. The application is used for a wide range of purposes, including data warehousing, e-commerce, and logging applications. The most common use for MySQL however, is for the purpose of a web database.

## LITERATURE SURVEY:-

- **Distance learning:** a form of education in which the main elements include physical separation of teachers and students during instruction and the use of various technologies to facilitate student-teacher and student-student communication.<sup>[1]</sup>
- **Online learning:** 'education that takes place over the internet'.<sup>[2]</sup> This can be subdivided into *asynchronous online courses* that do not take place in real-time and *synchronous online courses* in which teacher and student interact online simultaneously.<sup>[3]</sup>
- **Blended learning:** a hybrid mode of interaction which combines face-to-face in-person meetings with online interaction.<sup>[4]</sup> As blended learning is a hybrid model, either the face-to-face or the online elements may be dominant. So, for example, blended learning can occur when online instructional tools are used to support face-to-face learning in a classroom, or when some face-to-face instruction is interspersed with online learning as part of a longer course.
- **A virtual school:** 'an entity approved by a state or governing body that offers courses through distance delivery—most commonly using the internet'.<sup>[5]</sup>
- **Self-regulated learning:** 'the modulation of affective, cognitive and behavioural processes throughout a learning experience in order to reach a desired level of achievement'. Self-regulating learning skills have been described as abilities such as planning, managing and controlling the learning process.<sup>[7]</sup> Processes that occur during self-regulated learning include goal setting, metacognition and self-assessment.<sup>[8]</sup>

## DATA FLOW DIAGRAM

Data flow diagrams are widely used for modeling requirements. DFDs show the flow of data through a system. The DFD is also known as a data flow graph or a bubble chart.

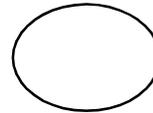

## StandardsymbolusedforDFD

### 1. DATAFLOW

It is used to connect processes to each other, to sources or sinks, the arrowhead indicates the direction of data flow.

### 2. PROCESS

It is used to represent some transformation of input data to yield output data.

### 3. SOURCE

A source of system input or sink of system outputs.

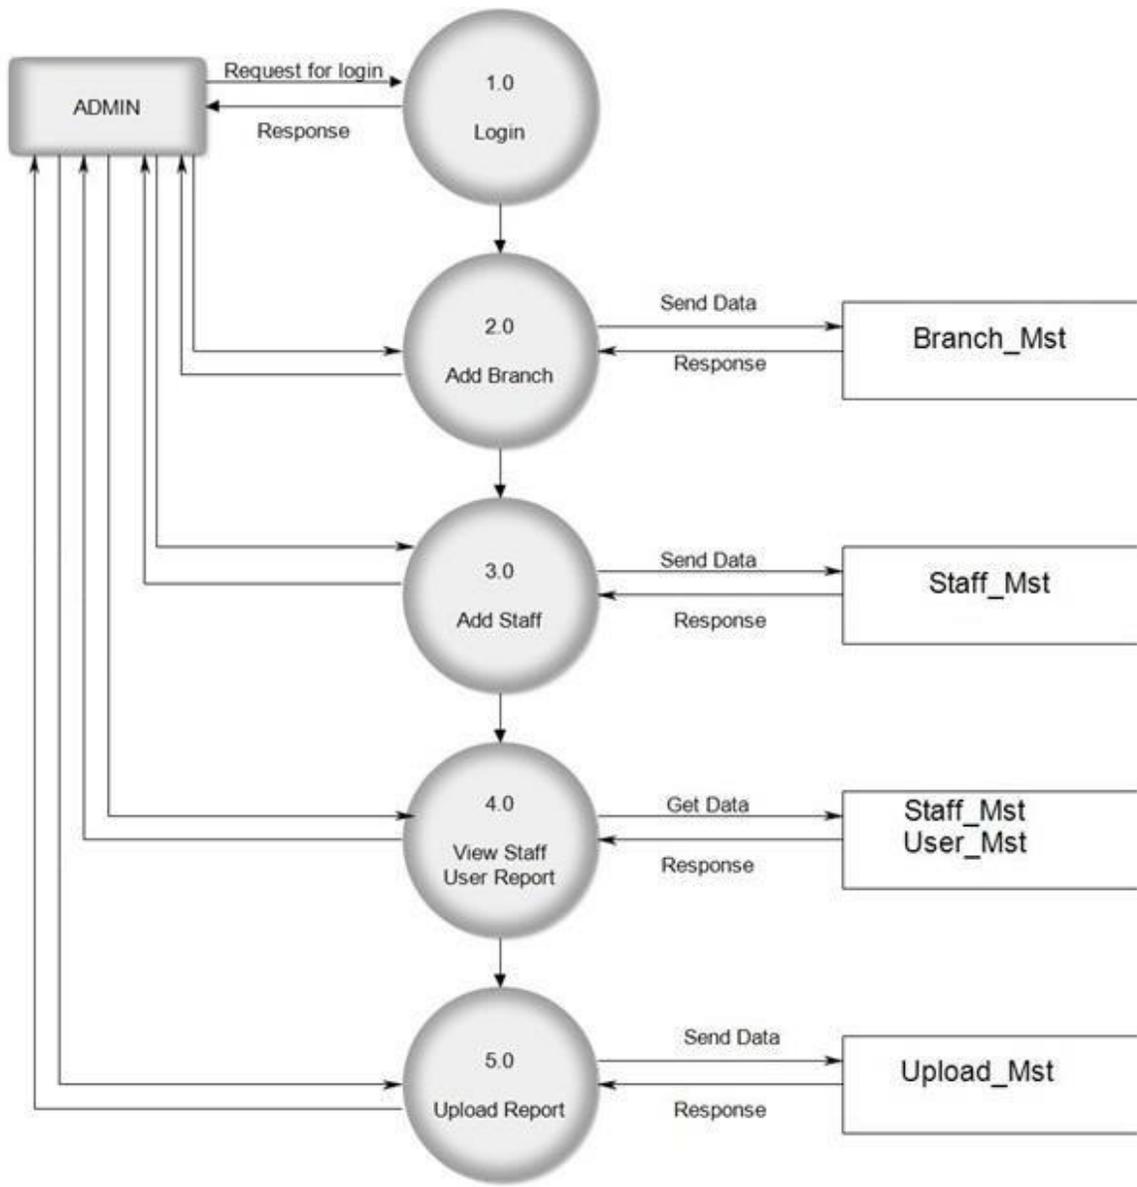

### 4. DATASOURCE

It is used for repository of data. The arrowheads indicate net inputs and net outputs.

## **User's 1<sup>st</sup> Level DFD**

### E-Rdiagram

An Entity-Relationship (ER) Diagram is a specialized graphic that illustrates the interrelationships between entities in a database. ER diagrams often use symbols to represent three different types of information. Boxes are commonly used to represent entities. Diamonds are normally used to represent relationships and ovals are used to represent attributes. If the application is primarily a database application, the entity-relationship approach can be used effectively for modeling some parts of the problem. The main focus in ER modeling is the Data Items in the system and the relationship

between them. It aims to create a conceptual scheme for the data from the user's perspective. The model thus created is independent of any models are:

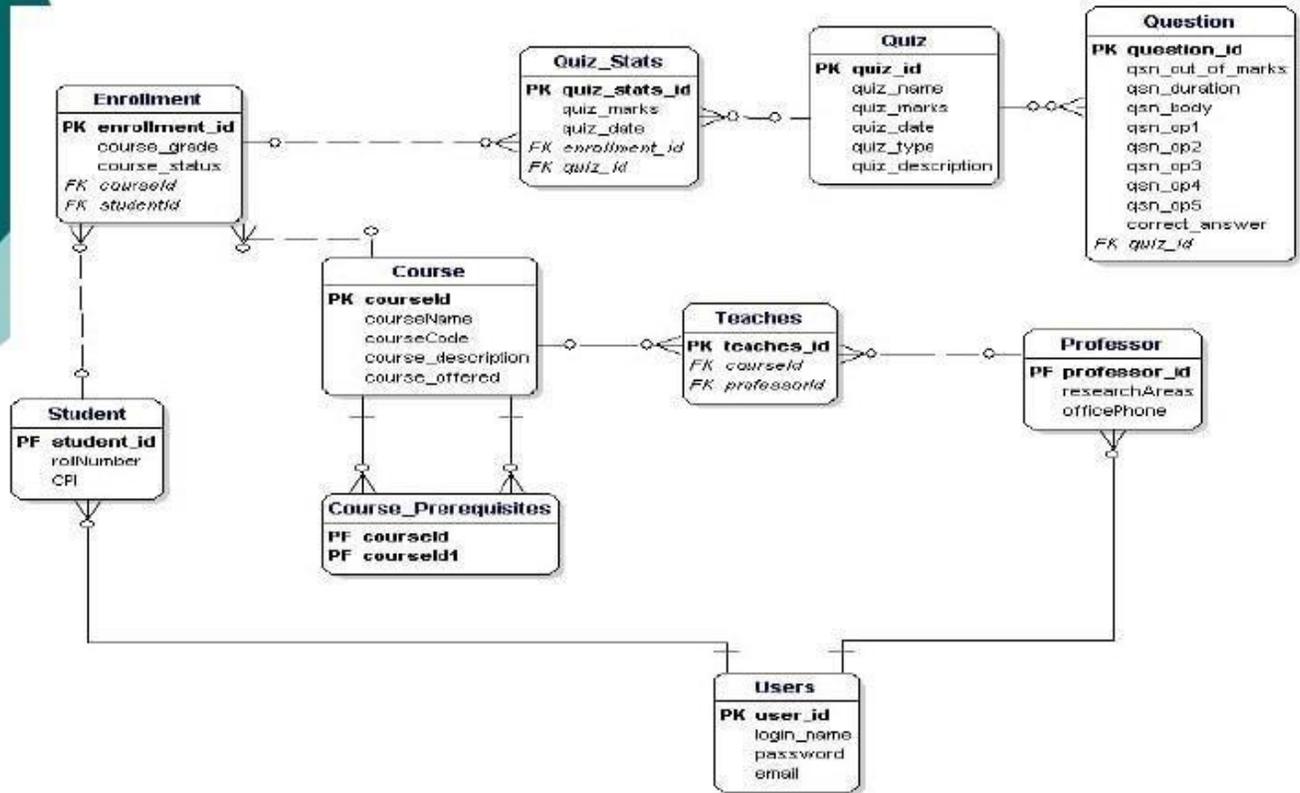

Symbols used in E-R  
diagram Entity box

This box contains a particular Entity, which may be an object of real world or hypothetical object.  
Attributes symbol

This symbol is used for defining the attributes of a particular entity. Diagonal symbol

This symbol is used to establish relationship among various departments or clients, which may also have, attribute

# ModulesDescription

## 1. StudentLogin:

It enables a person to login as a student or sign up if he/she has not registered for the classroom. Once logged in a student has the following features:-

### a) EditProfile:

It allows modifying the details

### b) StudyMaterial&VideoLectures:

It displays a list of ppts & interactive video lessons categorized by subjects as posted by the faculty

### c) Askdoubts:

It enables the students to ask questions

### d) Answers:

It shows the answers by the teachers to the questions asked by various students

## 2. FacultyLogin:

It enables a person to login as a faculty member or sign up if he/she has not registered for the classroom. Once logged in a faculty member has the following features:-

### a) EditProfile:

It allows modifying the details

## b) Study Material & Video Lectures:

It allows the faculty members to post & remove ppts & video lessons c) Doubts:

It shows all the questions asked by the students

d) Answers:

It enables teachers to answer the questions asked by the students

## 3. Administrator Login

The administrator is the ultimate controller of the application with the highest authority. He/she has

the following features:-

a) Student/Faculty:

It displays a list of students/faculty members registered for the classroom b) Student/Faculty req:

It displays a list of students/faculty members whose sign up request is still

pending c) PPT(upload/del)/Video(upload/del):

It displays a list of ppts & videos posted by the faculty members. The administrator has the power to remove ppts/videos from the list and upload according to wish

d) Question/Ans

It displays a list of questions asked by students/answersto questions by teachers. The administrator has the power to delete questions/answers from the list.

## TASK INFLUENCES:-

- The coded data under this sub-team refers to student perceptions of how much the classes support the purpose for which they were made, as well as any knowledge or limitations in this regard. Question list data pointed out that most students consider using classes in seminars as appropriate as well as appropriate, but interviews reveal that some readers assume that the manner in which these conversations were constructed did not make the best use of their synchronization power.
- The data suggested that there was a need to integrate the necessary offline preparation harmonious internet interaction, so that what happens in the classroom should be deeper, more purposeful reading, with shallow, superficial connections. To make this easier, it was they suggested that conferences should be broadcast several evenings each evening,
- Supporting presentations and notes should be made available in advance to allow others to review then come up with answers and helpful questions, and there should be more time to follow up discussion after each seminar.
- There is a tension between the situation and the fullness using classroom power to 'push the envelope' about innovation ways to communicate information. Second, learning experiences that require students to engage with feedback and communication it should be properly constructed, and guidelines should be developed to allow for the appropriate use of communication tools.  
This study revealed the limitations of the visual classes of top promoted deep understanding through deep meditation, as stated by Garrison and Cleveland-Innes (2005).
- If one goal is for students to engage deeply with the material once and for all for the visual class to support this, presentations and formal analysis guidelines content should be provided in advance, using non-compliant methods. This also applies where it is anticipating student contribution and collaborating with the work of others, through meaningful discussion and questions. Third, care must be taken that the use of visual aids does not adversely affect their flexibility and choice of students, undermining their reasons for their choice of ODL.
- The results are encouraging something 'important' three to four times with a 12-week semester course, a maximum of 1½ hours per session

## Results

Learning community consolidation, communication, and sharing knowledge: -The questionnaire data shows students viewed using classes as enhancing their learning the idea of membership in a learning community, as well as supporting the development of relationships among group members.

To develop relationships and encourage cooperation, and to help reduce their relationships as a sense of isolation. Answers to the interview provided insight into the reasons for this. Twelve students commented on the visual and verbal nature of the possible interaction classes have been instrumental in promoting a sense of commitment and commitment to others in their group, and somehow made them feel obligated to help them. Comments show a harmonious interaction of 'customized' relationships built through non-synchronized forums in Moodle, and that additional visual and audio sizes help combine these on a personal level. Some readers commented that a great foundation for relationships was created before class sessions, and that they work hard to integrate or transform existing relationships at a different level.

Eight students commented on their group's differences in this, in that they get to establish a working relationship is an easy process from at first — something they had never experienced in other online learning situations. These students often see classes as a bonus rather than an important creative tool relationships, in one comment, "after having all the other online experiences

## CONCLUSION

While acknowledging the limited limitations of this study, it demonstrates an important virtual role classes in promoting student interaction and integrating a sense of identity as members of the learning community. It highlights the need for teachers to set curriculum time in order to develop students' knowledge of how best to use the multimedia tools available in the classroom, as well as design, preparation, and careful planning of classroom activities to promote depth, more thoughtful reading, if that is the goal. Guidelines also need to be established on how and when communication tools should be used, so that their use does not disturb other users. Finally, Research suggests that teachers should be aware of the technological barriers in which students work, and while they intend to use the classroom to

its full potential, they must ensure that there are no such students who were deprived of opportunities due to technical quality or access problems. More research is needed to more accurately find the right combinations for the use of a consistent and asynchronous system within ODL courses, so that certain individual skills can benefit students externally without disrupting their flexibility and choice.
