Acknowledgement

I am very grateful to my project guide Mr.Lalit Sharma Sir for giving his valuable time and constructive guidance in preparing the Project. It would not have been possible to complete this project in short period of time without his kind encouragement and valuable guidance.

INTRODUCTION

“FIR SYSTEM’ is a free, travel-oriented community website featuring user-contributed guides for launch the complaint. E-Crime Report (often written E-CR) is one of a number of complaint websites on the Web. “FIR SYSTEM” hosts content such as suggestions, reviews and lots of attractive choices for the users are available. Because of E-Crime Report is the best platform to launch their complaint by the around India as it enables the general public to register on the site as a 'member' and use a number of services at no cost.

“FIR SYSTEM” uses social media techniques to provide not just content for complain issues, but to enable a sense of community through its active crime forums.

We discovered this cool guide website which covers nearly 150 police station around India.

(1)

OBJECTIVE

“FIR SYSTEM” is a informal and interactive website loaded with destination knowledge, research skills, public speaking techniques. It is designed to launch complaint by the Victim (User) according to their information as well as proofs based on the crime, so admin can transfer all the information to nearest police station via user addresses.

By the end of the course the participant will be able to

- describe the background and roles of services
- explain the elements of effective information
- source information
- complaint against any crime
- easy to launch complaint
- create and deliver their information
- perform administrative tasks.

(2)

FEASIBILITY STUDY

Feasibility study is a measure of how beneficial the development of an information system would be an organization.

Feasibility study is carried out to select the best system that needs performance requirements. So we can say feasibility study has been determined that our project is enable the analyst can go ahead and prepare project specification which finalize the project requirement.

The prime focus of the feasibility study is evaluating the practicality of the proposed system keeping in mind a number of factors.

The following factors are deciding in favor of the project development.

1.ECONOMIC FEASIBILITY:

The proposed of "FIR SYSTEM" will save time for users as it provides information on your click. This system will help to get updated information with short amount of time. Every registered user is able to see this website. Everything will maintain automatically. There is no any employee work and it will reduce employee resource, because system will maintain all manual works for users.

2.TECHNICAL FEASIBILITY:

As the saying goes, "to error is human". Keeping in view the above fact, develop project which automatically maintain user's record of organization, who wants to ask queries through system. The key process area of current system is nicely amenable to automation and hence the technical feasibility is proved beyond doubt.

(3)

3.OPERATIONAL FEASIBILITY:

The project maintenance is time-consuming. The project will not only increase the authentication efficiency from unauthorized users. This system will maintain time and will complete process in less time without any other resource like; calling any authority or getting information from any concerned department.

(4)

ANALYSIS

High Level DFD and Data Dictionary

1. Data Dictionary

Data dictionary is a metadata i.e. data about data. It's a repository that contains descriptions of all data objects consumed or produced by the software. It lies at the core of the analysis model.

2. DFD (Data Flow Diagram)

DFD stands for data flow diagram. DFD is a graphical technique that depicts information and the transforms that are applied as data moves from input to output. The DFD is also known as Bubble Chart. The data flows diagram may be used to represent a system or software at any level of abstraction. In fact, DFD may be portioned into a level that represents increasing information flow and functional details. Therefore, the DFD provides a mechanism for functional modeling as well as information flow modeling. In so doing it satisfies the second operational analysis principal.

Data flow diagram (DFD)

Level 0 DFD

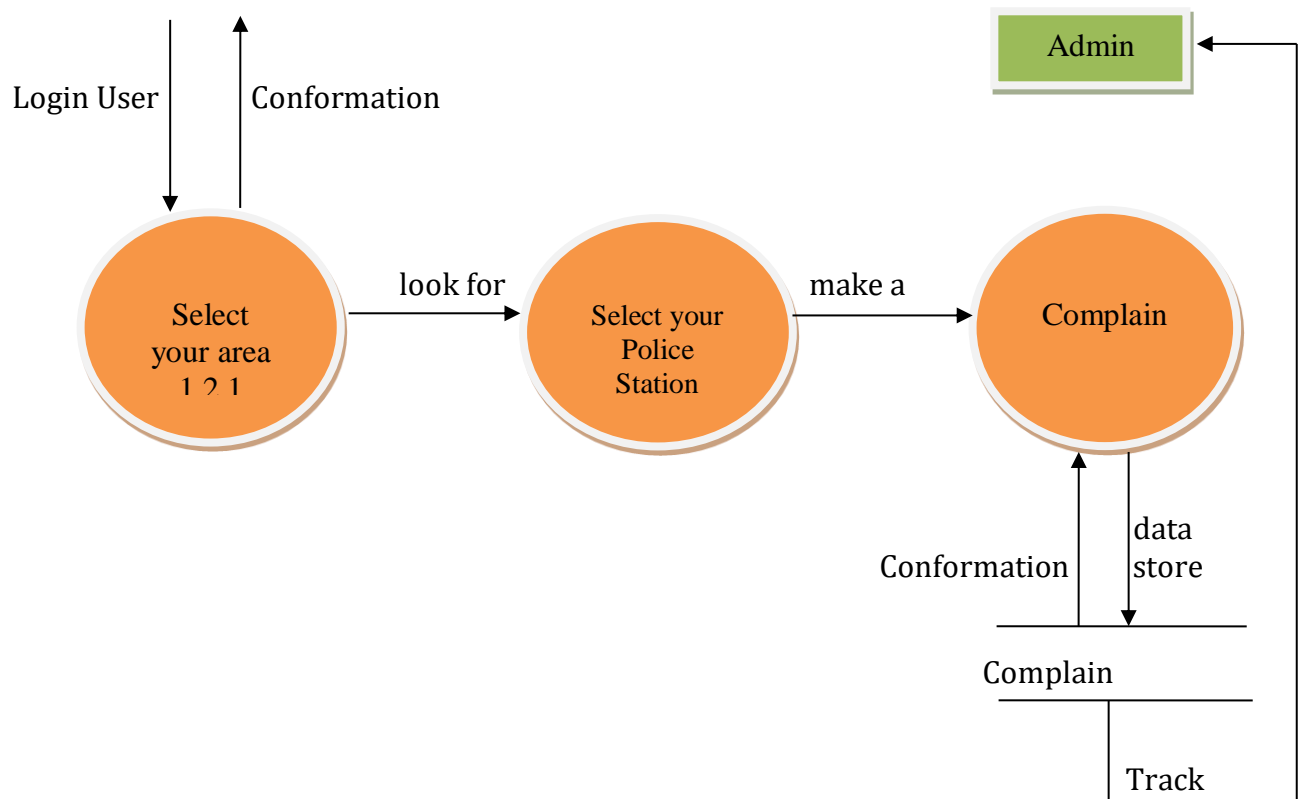

(6)

Level 1 DFD

(7)

Level 2 DFD

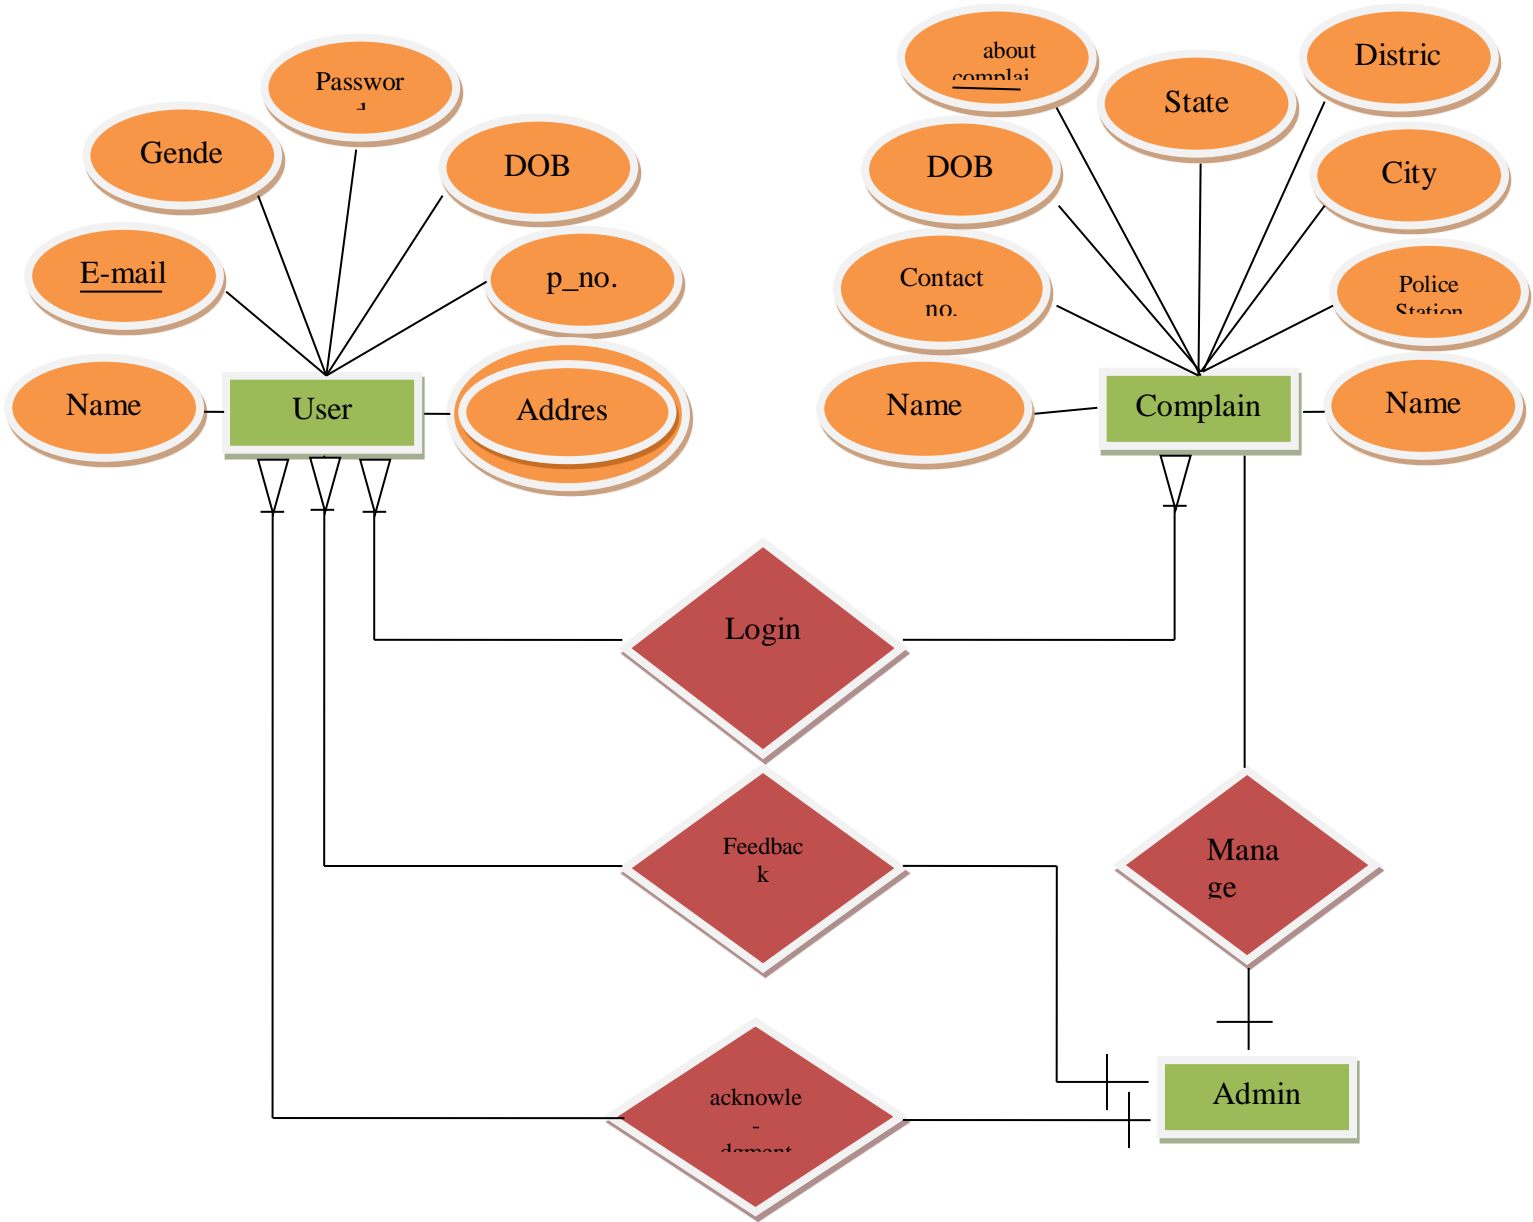

(8)

Entity Relationship Diagram

An entity-relationship (ER) diagram is a specialized graphic that illustrates the interrelationships between entities in a database. ER diagrams often use symbols to represent three different types of information. Boxes are commonly used to represent entities. Diamonds are normally used to represent relationships and ovals are used to represent attributes.

An entity-relationship model (ERM) in software engineering is an abstract and conceptual representation of data. Entity-relationship modeling is a relational schema database modeling method, used to produce a type of conceptual schema or semantic data model of a system, often a relational database, and its requirements in a top-down fashion.

(11)

HARDWARE AND SOFTWARE REQUIREMENT

1. Hardware Specification:

Processor: Dual Core or Higher

RAM: 512MB or Higher

Hard Disk: 40GB or Higher

Monitor: 15"CRT or LCD

Keyboard: Normal or Multimedia

2. Software Specification:

Operating System: Windows 7/8

Front End: HTML,CSS, PHP

Back End : MYSQL

Screen Shots

1) Login Page

The screenshot shows a web browser window displaying the login page for the Indian Police E-CRIME REPORT system. At the top, a dark red banner contains the text "E-CRIME REPORT" in white. Below this, the page is divided into two main sections. On the left, there is a graphic featuring the Ashoka Lion Capital, the motto "सत्यमेव जयते" (Satyameva Jayate) in Devanagari script, and the word "POLICE" in large, bold, white letters on a red and blue background. On the right, the text "Indian Police" is displayed in a bold, dark blue font, followed by "WELCOME!" and "TO LAUNCH YOUR COMPLAIN" in a smaller, black font. Below the graphic and text, the heading "USER LOGIN" is centered. At the bottom left, the word "Login" is written above a form with two input fields: "E-Mail:" and "Password:". A "Submit" button is located to the right of the "Password:" field.

2) Home Page

The screenshot shows a website with a dark red header containing the text "E-CRIME REPORT" in white. Below the header is a navigation menu with five items: "HOME", "LAUNCH FIR", "ABOUT", "CONTACT", and "ADMIN". The main content area features a large, metallic-looking shield logo for the "INDIAN POLICE" on the left. The logo includes a central emblem with a scale of justice and a sword, with the words "INDIAN" and "POLICE" written across it. To the right of the logo is a text block titled "Indian Police" in bold. Below this title is a paragraph of text: "THE FIRST POLICE COMMISSION, APPOINTED ON 17 AUGUST 1865, CONTAINED DETAILED GUIDELINES FOR THE DESIRED SYSTEM OF POLICE IN INDIA AND DEFINED THE POLICE AS A GOVERNMENTAL DEPARTMENT TO MAINTAIN ORDER, ENFORCE THE LAW, AND TO PREVENT AND DETECT CRIME." Below the logo and text block is a section titled "NEWS & UPDATES" containing two numbered items: "1. PM wants police to be active in community programmes." and "2. DNA: Comparative analysis of Indian police and US police." To the right of this section is a paragraph of text: "The Indian Police Service is not a force itself but a service providing leaders and commanders to staff the state police and all-India Central Armed Police Forces. Its members are the senior officers of the police. With the passage of time Indian Police Service's objectives were updated and redefined, the current rules and functions of an Indian Police Service Officer are as follows:" followed by a numbered list item: "1. To fulfil duties based on border responsibilities, in the areas of maintenance of public peace and order, crime prevention, investigation, and detection, collection of intelligence, VIP security, counter-terrorism, border policing, railway policing, tackling

3) Launch FIR

The screenshot shows a web page titled "E-CRIME REPORT" with a dark red header. Below the header is a navigation menu with buttons for "HOME", "LAUNCH FIR", "ABOUT", "CONTACT", and "ADMIN". The main content area is split into two columns. The left column features a large image of a computer mouse cursor clicking on a "http://www" URL. The right column contains the heading "What is FIR? (First Information Report)" followed by a paragraph explaining its importance: "FIR IS AN IMPORTANT DOCUMENT BECAUSE IT SETS THE PROCESS OF CRIMINAL JUSTICE IN MOTION. IT IS ONLY AFTER THE FIR IS REGISTERED IN THE POLICE STATION THAT THE POLICE TAKE UP INVESTIGATION OF THE CASE. ANYONE WHO KNOWS ABOUT THE COMMISSION OF A COGNIZABLE OFFENCE, INCLUDING POLICE OFFICERS, CAN FILE AN FIR." Below this text is a section titled "Launch your FIR" containing a form with three fields: "Registered Email id:" with a text input box, "State" with a dropdown menu showing "Select", and "City:" with a text input box.

4) About Us

The screenshot displays a web application interface for an 'E-CRIME REPORT'. At the top, a dark red header contains the title 'E-CRIME REPORT' in white. Below this is a horizontal navigation menu with five items: 'HOME', 'LAUNCH FIR', 'ABOUT', 'CONTACT', and 'ADMIN'. The main content area features a large image on the left showing a computer mouse cursor pointing at a URL 'http://www'. To the right of the image is a text block titled 'What is FIR? (First Information Report)'. The text explains that FIR is an important document in criminal justice, registered at a police station, and that anyone with knowledge of a cognizable offence can file an FIR. Below the text is a form titled 'Launch your FIR' with three input fields: 'Registered Email id:' (a text box), 'State' (a dropdown menu with 'Select' as the current option), and 'City:' (a text box).

VALIDATION AND VARIFICATION

In software project management, software testing, and software engineering, verification and validation (V&V) is the process of checking that a software system meets specifications and that it fulfills its intended purpose. It may also be referred to as software quality control. It is normally the responsibility of software testers as part of the software development lifecycle.

TESTING THE SOFTWARE

Testing is a set of activities that can be planned in advance and conducted systematically. For this reason a set of steps into which we can place specific test case design techniques and testing methods should be defined. Various software-testing methods provide the software engineer with a template for testing with the following characteristics:

- ☞ Testing begins at the module level and works outwards toward the integration of the computer base system.
- ☞ Different testing techniques are appropriate at different points in time.
- ☞ The developer of the software and an independent test group conducts testing.
- ☞ Testing and debugging are different activities but debugging must be accommodated in any testing strategy.

There are different testing techniques listed below:-

1. Unit testing

- ☞ Main outlook of unit testing is to uncover even the smallest problem in the software design of each module.

2. Alpha testing

Alpha testing is an acceptance test conducted by the end user rather than the system developer, an acceptance test can range from an informal “test drive” to a planned and systematically executed series of tests. This test is carried out to uncover all the problem faced by the user and to see if the validation techniques used are working well.

FUTURE SCOPE OF ENHANCEMENT

1. "FIR SYSTEM" will be online on web.
2. will be available a "FIR SYSTEM" s app in near future.
3. The Contact Us form will also contain Upload File option so that any user can upload his/her innovative idea on web site which may be published.
4. OTP (One Time Password) in User Registration will be provided so that valid user can upload their files.

LIMITATIONS

1. It is only use for domestic level.
2. Online data.
3. Branches of particular places might change with time.
